North Seattle College

📅 2008 - 2010

📍 Seattle, WA

SKILLS

- Compassionate
- Multi-tasking
- Oral Prophylaxis
- Teamwork
- Teeth Cleaning
- Soft Tissue Management

CAREER OBJECTIVE

Empathetic dental hygienist specializing in delivering optimal patient care with 12 years of experience. Leveraging high proficiency of modern dental practices (digital radiography, soft tissue management, etc.) with strong interpersonal communication skills that builds rapport with diverse populations, I am eager to join West Valley Dental to improve the patient experience and clinic growth.

WORK EXPERIENCE

Dental Hygienist

Jai Shin DDS

📅 2016 - current 📍 Seattle, WA

- Provide dental care services to 10+ patients daily, meeting the clinic's high standards of patient satisfaction.
- Identify oral health issues, advise patients on dental hygiene, and assist in dental periodontal and pathology assessments, including fluoride treatments and whitening services.
- Prepare local anesthesia and assist with oral surgeries and extractions 3 times per week.
- Awarded Employee of the Year for efforts in increasing patient satisfaction from 87% to 93% in 2018.

Dental Hygienist

Metropolitan Dental

📅 2012 - 2016 📍 Seattle, WA

- Treated 8 patients daily, providing exams, teeth cleanings, and scheduling follow-up appointments with friendly customer service that followed patient safety and privacy protocols.
- Maintained and sterilized dental equipment, and mixed amalgams, cements, silicates, and other materials.
- Cleaned calcareous deposits, accretions, and stains from teeth and beneath gum margins with dental instruments.
- Demonstrated competency in whitening procedures, and provided patient education to maximize results by 15% with minimal sensitivity.

Dental Hygienist

Bensonhurst Dental

📅 2010 - 2012 📍 Seattle, WA

- Treated 8 patients daily including patient assessment, treatment planning and explanation, executing dental hygiene/periodontal treatment, and scheduling follow-up appointments.
- Evaluated clinical findings and dental records to assist in patient plans, helping improve overall patient oral hygiene by 17%.
- Used electronic health recording system for clinical activities, and recorded oral conditions on dental and periodontal charts.
- Adjusted treatment plans along with dentist in 30-minute meetings prior to first patient arrival each day.
